April 2007

---

## Things to do

Weather permitting...

- Clean up beds and borders; cut down any remaining foliage from last year. Remove leaves and pull back winter mulches.
- Check forced bulbs and bring out of the cold storage if tips have sprouted 2" or more.
- Plant shrubs, trees, perennials and spring bulbs as soon as the ground is workable (not too wet).

Things to keep you occupied indoors until the weather improves:

- Clean and sharpen garden tools and oil wooden handles with linseed oil.
- Thoroughly clean planting containers with soapy water and bleach.

**Sketch your garden to remember where plants and bulbs are located. Plan where the new seeds and plants will go according to your colour scheme.**

**Jot down notes on plants and bulbs that will start to grow and which ones you may want to divide or move.**
